

# OMNIBYTE TECHNOLOGY

## **SUMMARY OF RESPONSIBILITIES:**

OmniByte Technology is a growing software company in Fargo, ND and we are hiring experienced innovators looking for a fun place to create and be challenged. As a Technical Consultant with OmniByte you will work directly with clients and partners to design and develop custom software solutions and services for large scale business applications. Position may be located anywhere in the U.S.

Our services team focuses on quality solutions using the latest technologies for business software developed in a mobile and/or cloud solution. Your goal every day is to deliver advanced technical solutions which help the end user be more productive; get more done and maximize investment in current technologies. We are looking for leaders in technology to join us in providing the highest of quality solutions and advanced services and to enhance and integrate OmniByte's solutions.

An ideal candidate will possess strong, customer services skills and demonstrated capabilities in programming, is passionate about problem solving and building technologies which help businesses run more efficiently, improve quality, and reduce costs.

We are looking for those that dare to share crazy ideas and ask a lot of questions.

## **Essential Duties & Responsibilities**

- Design, develop, migrate, test, deploy, maintain, and deliver creative business solutions for complex business problems on new or existing business applications.
- Drive innovation and integration of new technologies while providing a positive, user-friendly experience.
- Be client focused and delivering a product which is centered around a great client experience.
- Contribute to success of professional services departmental goals.
- Work directly with clients and partners to configure, enhance, integrate, and maintain business solutions for new and existing business applications including OmniByte products.
- Evaluate current and future implementations and recommend design modifications or enhancements to eliminate roadblocks or improve product performance based on end-user feedback.
- Write and execute complete testing plans, protocols, and documentation for applications; identify and debug, and create solutions for issues with code and integration into software architecture.
- Cross functional collaboration with other team members/departments to problem solve, mentor, transfer knowledge and encourage innovation in all aspect of organization.

## **Basic Qualifications**

- BA/BS degree in Computer Science or related technical field or equivalent practical experience.
- 4+ years of experience in designing, developing, debugging, and shipping high-quality, commercial software or services. (academic development experience not considered)
